No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score

    Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score

PTM: Undergoes a complex proteolytic maturation which generates a variety of processed secreted forms with increased activity towar vegeta and vegeta. Vegeta form an antiparallel homodimer linked by disulfide bonds before secretion. The fully processed Vegeta is composed mostly of two Vegeta homology domains (VHDs) bound by non-covalent interactions.

SIMILARITY: BELONGS TO THE PDGETVEGET FAMILY OF GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      L; V12863; CAA73370.1; ...; Y12864; CAA73370.1; ...; Y12864; CAA73371.1; ...; Y12865; CAA73371.1; JOINED. RA Submitted (JUL-1997) to the EMBL/GenBank/DDBJ databases.

RI Submitted (JUL-1997) to the EMBL/GenBank/DDBJ databases.

C -!- FUNCTION: Growth factor active in anglogenesis, lymphangiogenesis and endothelial cell growth, stimulating their proliferation and constraint and endothelial cell growth, stimulating their proliferation and gration and also has effects on the permeability of blood vessels. May function in the formation of the venous and lymphatic vascular systems during embryogenesis, and also in the maintenance of differentiated lymphatic endothelium in adults. Binds and confidence of the constraint of the venous and lymphatic endothelium in adults. Binds and confidence of the constraint of the venous and lymphatic endothelium in adults. Binds and confidence of the covalent and antiparallel (By similarity).

C -!- SUBBUNIT: Homodimer; non-covalent and antiparallel homodimer of the covalent and antiparallel homodimer of the covalent and the processed secreted forms with increased activity toward linked by disulfide bonds before secretion. The fully processed screen and the processed secretion of two VEGF homology domains (VHDs) behand by non-covalent interactions (Nu eminiarity).

PTM: Undergoes a complex proteolytic maturation which generates a variety of processed secreted forms with increased activity toward vEGFR-3 and VEGFR-2. VEGF-D first form an antiparallel homodimer linked by disulfide bonds before secretion. The fully processed VEGF-D is composed mostly of two VEGF homology domains (VHDs) bound by non-covalent interactions (By similarity).

SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.

"Molecular cloning, expression, and functional significance of a

cytochrome p450 highly expressed in rat heart myocytes.";

J. Biol. Chem. 272:12551-12559(1997).

J. Biol. Chem. 272:12551-12559(1997).

T. FUNCTION: THIS ENZYME METABOLIZES ARACHIDONIC ACID PREDOMINANTLY

VIA A NADPH-DEPENDENT OLEFIN EPOXIDATION MAINLY TO 14,15-, 11,12-,

AND B.9-EPOXYEICOSATRIENOIC ACIDS (EET). IT ALSO ACTS AS AN OMEGA-

1-HYDROXYEICOSATETRAENOIC ACID (19-0H-AA).

HYDROXYEICOSATETRAENOIC ACID (19-0H-AA).

-I-- CATALYTIC ACTIVITY: RH + reduced flavoprotein + O(2) = ROH +

CC :-FUNCTION: Growth factor active in angiogenesis, vasculogenesis and cendothelial cell growth. It induces endothelial cell proliferation, promotes cell migration, inhibits apoptosis, and cendothelial cell growth. It induces endothelial cell proliferation, promotes cell migration, inhibits apoptosis, and cendothelial cell growth. It induces endothelial cell proliferation, promotes cell migration, inhibits apoptosis, and cell force induces permeabilization of blood vessels. It binds to the veception of proliferation of blood vessels. It binds to the veception in the proportion of blood vessels. It binds to the veception in the proportion of blood vessels. It binds to the veception in the proportion of blood vessels. It binds to the veception in the proportion of blood vessels. It binds to the veception of blood vessels. It binds to the vessels to be provided by blood to the vessels. It binds to the vessels to be provided by blood t

-: FUNCTION: Growth factor active in angiogenesis, vasculogenesis are endothelial cell growth. It induces endothelial cell proliferation, promotes cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the VEGFRI/Fit-1 and VEGFRZ/Kdr receptors and to heparan sulfate and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DiSalvo J., Bayne M.L., Conn G., Kwok P.W., Trivedi P.G., Soderman D.D., Palisi T.M., Sullivan K.A., Thomas K.A., "Purification and characterization of a naturally occurring vascular "Purification and characterization of a naturally occurring vascular".
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       "Developmental expression of vascular endothelial (VEGF-A) splicing variants, VEGF-A188, VEGF-A164, masseter muscle.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     "Amino acid and cDNA sequences of a vascular endothelial cell mitogen that is homologous to platelet-derived growth factor."; proc. Natl. Acad. Sci. U.S.A. 87:2628-2633(1990).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SEQUENCE OF 27-40.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TISSUE SPECIFICITY: Expressed in the pituitary, in brain, in particularly in supraoptic and paraventricular nuclei and the particularly in supraoptic and paraventricular nuclei and the choroid plexus. Also found abundantly in the corpus luteum of the ovary and in kidney glomeruli.
SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          after secretion and is bound avidly by heparin and the extracellular matrix, although it may be released as a soluble form by heparin, heparinase or plasmin (By similarity).
ALTERNATIVE PRODUCTS: At least 4 isoforms; VEGF-A188 (shown here), VEGF-A164, VEGF-A144 and VEGF-A120; are produced by alternative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   VEGF-A164 is more basic, has heparin-binding properties and, although a signicant proportion remains cell-associated, most is freely secreted. VEGF-A188 is very basic; it is cell-associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  with PIGF (By similarity).
SUBCELLULAR LOCATION: VEGF-A120 is acidic and freely secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       heparin (By similarity).
SUBUNIT: Homodimer; disulfide-linked.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      H., Arakawa T., Okayama M., Oota I., Takuma T.,

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RESULT A39035

ribonuclease-related anti-tumor protein - northern leopard frog (fragment) C;Species: Rana pipiens (northern leopard frog) C;Date: 31-Uul-1991 #sequence\_revision 31-Uul-1991 #text\_change 30-Jun-1993 C;Accession: A39035 R;Ardelt, W.; Mikulski, S.M.; Shogen, K. J. Biol. Chem. 266, 245-251, 1991 J. Biol. Chem. 266, 245-251, 1991 A;Title: Amino acid sequence of an anti-tumor protein from Rana pipiens oocytes and A;Reference number: A39035; MUID:91093131 A;Accession: A39035

A;Status: preliminary A;Molecule type: protein A;Residues: 1-104 <ARD> C;Superfamily: pancreatic ribonuclease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Database :
  Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score

TISSUE SPECIFICITY: Highly expressed in lung, heart, small intestine and fetal lung, and at lower levels in skeletal muscle,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PTM: Undergoes a complex proteolytic maturation which generates a variety of processed secreted forms with increased activity toward VEGFR-3 and VEGFR-2. VEGF-D first form an antiparallel homodimer linked by disulfide bonds before secretion. The fully processed VEGF-D is composed mostly of two VEGF homology domains (VHDs) bound by non-covalent interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PF00341;

Submitted (JUL-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Growth factor active in angiogenesis, lymphangiogenesis and endothelial cell growth, stimulating their proliferation and migration and also has effects on the permeability of blood vessels. May function in the formation of the venous and lymphatic vascular systems during embryogenesis, and also in the maintenance of differentiated lymphatic endothelium in adults. Binds and activates VEGFR-3 (Flt4) receptor (By similarity).
-!- SUBUNIT: Homodimer; non-covalent and antiparallel (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SUBURIT: Homodimer; non-covalent and antiparallel (by similarity)
SUBCELLULAR LOCATION: Secreted (By similarity)
PTM: Undergoes a complex proteolytic maturation which generates a
variety of processed secreted forms with increased activity towar
vEGFR-3 and VEGFR-2. VEGF-D first form an antiparallel homodimer
linked by disulfide bonds before secretion. The fully processed
vEGF-D is composed mostly of two VEGF homology domains (VHDs)
bound by non-covalent interactions (By similarity).
SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PS00249; PDGF_1; 1.

"The specificity of receptor binding by vascular endothelial growth factor is different in mouse and man.";
J. Biol. Chem. 276:19166-19171(2001).

-i- FUNCTION: Growth factor active in angiogenesis, lymphangiogenesis and endothelial cell growth, stimulating their proliferation and migration and also has effects on the permeability of blood migration and also has effects on the permeability of blood vascular systems during embryogenesis, and also in the maintenance of differentiated lymphatic endothelium in adults. Binds and activates VEGER-3 (Flt4) receptor.

Molecular cloning of a novel vascular endothelial growth factor,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2 ASELGKSTNTF 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ASELGKTTNTF 136
                                                                                                  SUBUNIT: Homodimer; non-covalent and antiparallel.
SUBCELLULAR LOCATION: Secreted.
TISSUE SPECIFICITY: Highly expressed in fetal and adult lung.
DEVELOPMENTAL STAGE: Expressed in a dynamic pattern in severa
body structures and organs of the embryo such as limb buds,
acoustic ganglion, teeth, heart, anterior pituitary as well a
lung and kidney mesenchyme, liver, derma, and periosteum of t
PTM: Undergoes a complex proteolytic maturation which generates a variety of processed secreted forms with increased activity toward
                                                    vertebral column. INDUCTION: By the transcription factor c-fos.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Natl. Acad. Sci. U.S.A. 93:11675-11680(1996).

"Refined 1.7 A X-ray crystallographic structure of P-30 protein, an amphibian ribonuclease with anti-tumor activity.";

J. Mol. Biol. 236:1141-1153(1994).

-1- FUNCTION: BASIC PROTEIN WITH ANTIPROLIFERATIVE/CYTOTOXIC ACTIVITY AGAINST SEVERAL TUMOR CELL LINES IN VITRO, AS WELL AS ANTITUMOR IN VIVO. IT EXHIBITS A RIBONUCLEASE-LIKE ACTIVITY AGAINST HIGH MOLECULAR WEIGHT RIBOSOMAL RNA.

-1- BEVELOPMENTAL STAGE: EARLY EMBRYOS (UP TO FOUR BLASTOMERE STAGE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             STRAND

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
